Linear: The Operating System for Software Teams

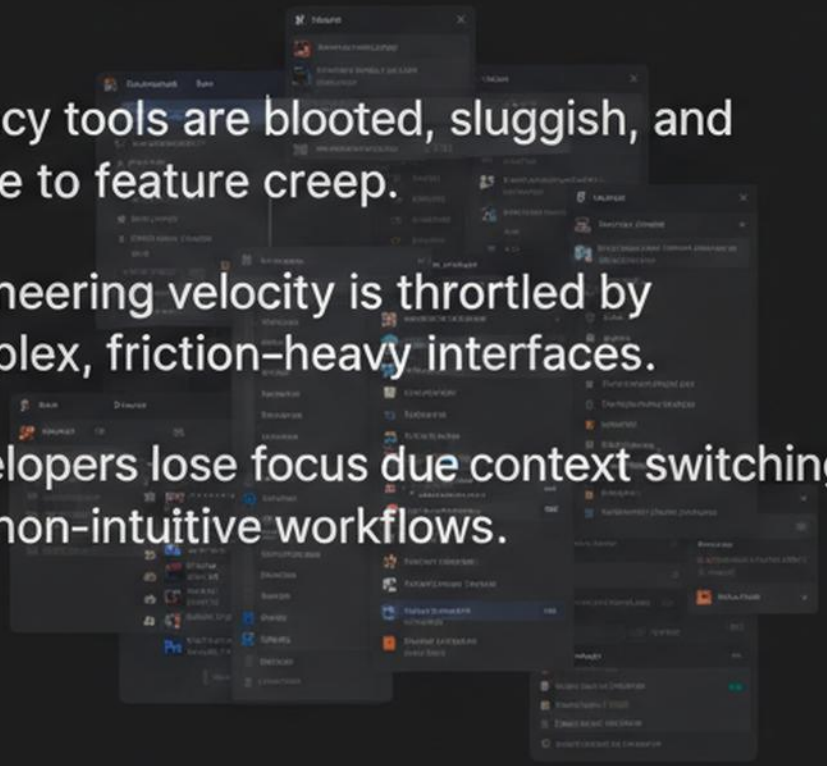

- High-performance issue tracking and project management.
- Built for teams that priorizze speed ond crastsmahip.

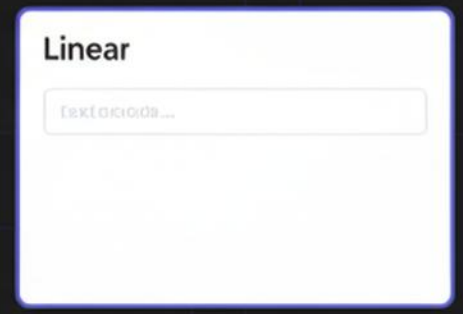

$500K Funding Round

Q4 2024

Software tools shouldn’t slow you down

- Legacy tools are blooted, sluggish, and prone to feature creep.
- Engineering velocity is throrted by complex, friction-heavy interfaces.
- Developers lose focus due context switching and non-intuitive workflows.

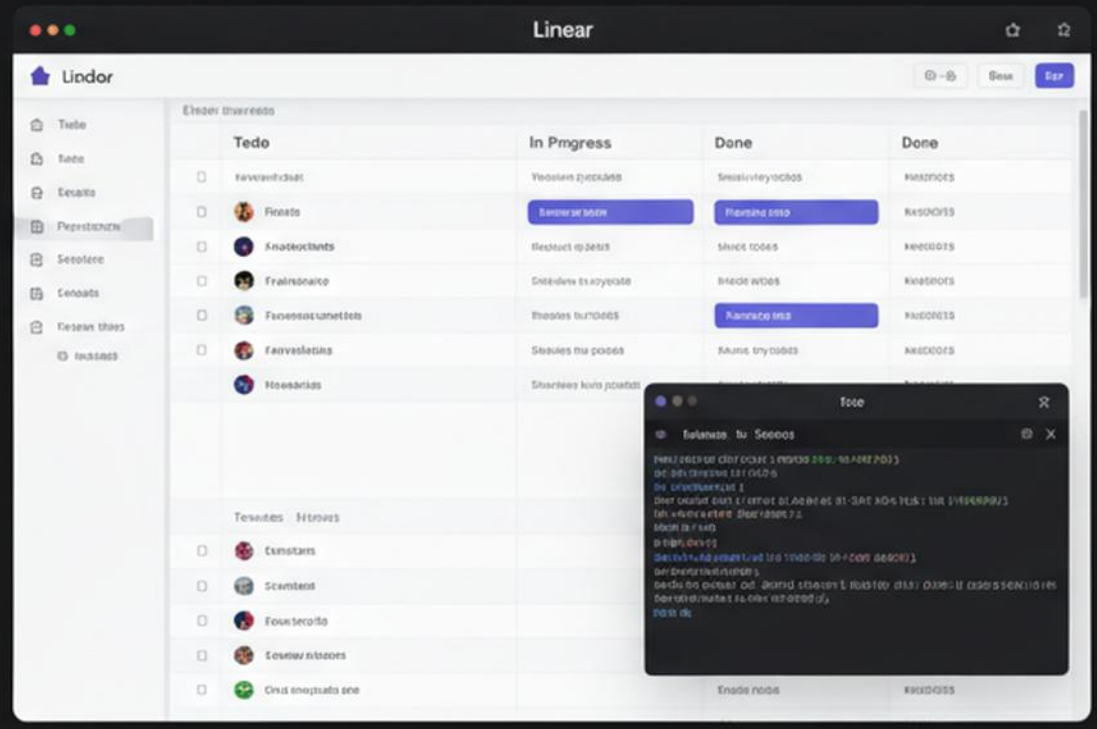

Precision-engineered project management

- Keyboard-first interface designed for rapid navigation.
- Streamlaned workflows that mirror how elite engineering teams actually work.
- Extreme focus to latency and performance to remove mental friction.

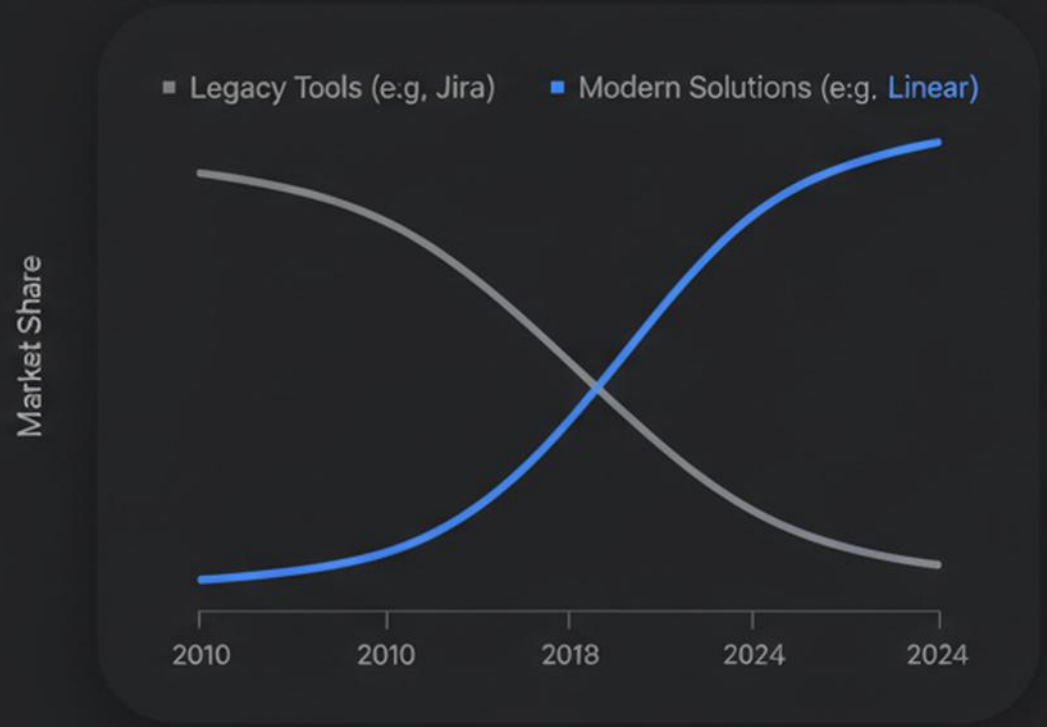

Built for Performance

- Integrated issue tracking, roadmaps, and cycle management.
- Deep integrations with GitHub, GitLab, and Slack.
- Command-line interface (CLI for power users.

The modern standard for engineering teams

- Large-scale distasffuation with legacy ALM incunbents (Jira).
- Targeting the growing segment of product-led, high-growth startups
- Positioned to capture market share from tools that sacrifice UX for configuration

Adopted by merit, not mandate

- Product-led growth (PLG) strategy driven by developer advocaacy.
- Viral adoption within engineering teams through seamless UX.
- Building a reputation as the developer's preforred tool to choice.

Funding Ask: $500K

Funding to scale excellence

$500K

- - We are raising $500K to accelerate product development and infrastrcture.
- - Focus on scaling the team to maintain technical superioity.
- - We are looking to strategic partners who value design-centric, high-performance software.
